

## Health Network “In Focus”

***“We have a consistent framework to manage our Health Network, but we can still present a different look and feel to our diverse websites”.***

### About The Health Network

The Health Network, working under WestFocus, brings together a number of diverse activities connected with Health and Well-being. It aims to raise the level of health and well-being by improving the range and take up of well-being products and services offered.

### The Challenge

The Health Network looks after three diverse audiences; B-well, [www.b-well.org.uk](http://www.b-well.org.uk) for young people to improve their well being, Working Well, [www.working-well.org.uk](http://www.working-well.org.uk) for those of a working age and Aging Well, [www.ageing-well.org.uk](http://www.ageing-well.org.uk) for active seniors who want better well being. The challenge was to be able to centrally manage and edit online the content and share contact details across the three websites. The presentation needed to maintain consistency, with a similar ‘look and feel’ to that of the WestFocus parent site, and yet still have a unique identifying presentation with individual URL’s.

### The Solution

As part of the WestFocus consortium the solution was delivered onto the SiteManager platform, which manages the functions and content of the websites, eg: event management, user administration, and forums. All three websites can be created and edited centrally and consistently online.

ProjectManager runs and manages the shared contacts, companies and projects. Newsletters and emails are created, edited and delivered to easily editable distribution lists on the diverse subjects within the three websites.
